Adaptive Filter Theory. Handouts for EE 225A - Twenty-five lectures on adaptive filters, covering Wiener filters, Kalman filters, the LMS and RLS algorithms. Also covers the use of adaptive filters in spectrum estimation and speech processing applications.

RF Avenue - Adaptive Filter Tutorial & Theory -- Kalman

An adaptive filter is a system with a linear filter that has a transfer function controlled by variable parameters and a means to adjust those parameters according to an optimization algorithm. Because of the complexity of the optimization algorithms, almost all adaptive filters are digital filters. Adaptive filters are required for some applications because some parameters of the desired ...

Problem formulation. Relationship to the least squares filter. The realization of the causal Wiener filter looks a lot like the solution to the least squares estimate, except in the signal processing domain.

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Achieving our core mission, namely progress through knowledge, now requires two kinds of communication: one to our scientific peers, but another, more fraught yet critical, to the broader public.
