advanced robust and nonparametric pdf

Nonparametric statistics is the branch of statistics that is not based solely on parameterized families of probability distributions (common examples of parameters are the mean and variance). Nonparametric statistics is based on either being distribution-free or having a specified distribution but with the distribution's parameters unspecified.

This paper evaluates a new nonparametric rank test for abnormal security-price performance in event studies. Simulations with daily security-return data show that the rank test is better specified under the null hypothesis and more powerful under the alternative hypothesis than the parametric t-test. Unlike previous nonparametric tests, this rank test does not require symmetry in cross ...

A nonparametric test for abnormal security-price

Gaussian Processes and Kernel Methods Gaussian processes are non-parametric distributions useful for doing Bayesian inference and learning on unknown functions. They can be used for non-linear regression, time-series modelling, classification, and many other problems.

BackgroundMerkel-cell carcinoma is an aggressive skin cancer that is linked to exposure to ultraviolet light and the Merkel-cell polyomavirus (MCPyV). Advanced Merkel-cell carcinoma often responds to chemotherapy, but responses are transient. Blocking the programmed death 1 (PD-1) immune inhibitory pathway is of interest, because these tumors often express PD-L1, and MCPyV-specific T cells ...

The t-test is any statistical hypothesis test in which the test statistic follows a Student's t-distribution under the null hypothesis.. A t-test is most commonly applied when the test statistic would follow a normal distribution if the value of a scaling term in the test statistic were known. When the scaling term is unknown and is replaced by an estimate based on the data, the test ...
