This case study of good practice in learning and teaching in materials focuses on polymeric materials for use in blood bags. Author: Dr Nigel Mills Institution: University of Birmingham Background to the case study

Case Study: Materials for Blood Bags

Silk is a natural protein fiber, some forms of which can be woven into textiles. The protein fiber of silk is composed mainly of fibroin and is produced by certain insect larvae to form cocoons. The best-known silk is obtained from the cocoons of the larvae of the mulberry silkworm Bombyx mori reared in captivity (sericulture). The shimmering appearance of silk is due to the triangular prism ...

Silk - Wikipedia

For centuries, Bombyx mori silkworm silk fibroin has been used as a high-end textile fiber. Beyond textiles, silk fibroin has also been used as a surgical suture material for decades, and is being further developed for various emerging biomedical applications.

Structures, mechanical properties and applications of silk

Download the TMS2017 Preliminary Program for a searchable PDF of the program (information is current as of December 31) or view the Session Sheets through ProgramMaster for real-time updates for individual sessions (including abstracts for individual presentations).

Biomechanics is the study of the structure and function of the mechanical aspects of biological systems, at any level from whole organisms to organs, cells and cell organelles, using the methods of mechanics.

Biomechanics - Wikipedia

1. Introduction. Bone morphogenic protein-2 (BMP-2) is one of the most potent osteoinductive molecules from the BMP family and can induce bone at both entopic and ectopic locations,, .The biological half-life of commercially available BMPs is very short (< 12h), and the development of carrier materials for site specific delivery may enhance the bioactivity of BMP in-vivo.

Specimen manipulation strategies are illustrated schematically across the length scales involved in microand nanotensile testing. The top row shows examples of specimens that can be handled using tweezers. The middle and bottom rows require manipulators to harvest and transfer specimens to a ...

The Micro- and Nanoscale Tensile Testing of Materials

Human hair is considered a waste material in most parts of the world and its accumulation in waste streams causes many environmental problems; however, it has many known uses. Preventing waste of such a material requires both addressing the problems in the current usage and developing its utilization systems at locations where they are missing.
