Chemical biology is a scientific discipline spanning the fields of chemistry and biology. The discipline involves the application of chemical techniques, analysis, and often small molecules produced through synthetic chemistry, to the study and manipulation of biological systems. In contrast to biochemistry, which involves the study of the chemistry of biomolecules and regulation of biochemical ...

Nuclear energy vs. chemical energy. Mankind struggled for thousands of years to come to a correct understanding of how matter was constructed. The notion that everything consisted of earth, air, water and fire eventually gave way in the 1700s to "atomic theory" the notion that everything was made from tiny indivisible atoms. But the discovery of radioactivity in the late 1800s meant that ...
