Developmental biology is the study of the process by which animals and plants grow and develop.

Developmental biology also encompasses the biology of regeneration, asexual reproduction, metamorphosis, and the growth and differentiation of stem cells in the adult organism. In the late 20th century, the discipline has largely transformed into evolutionary developmental biology

Evolutionary biology is the subfield of biology that studies the evolutionary processes that produced the diversity of life on Earth, starting from a single common ancestor. These processes include natural selection,

common descent, and speciation.. The discipline emerged through what Julian Huxley called the modern synthesis (of the 1930s) of understanding from several previously unrelated ...

About - The Dunn Lab is in the Department of Ecology and Evolutionary Biology at Yale University.. We study how evolution has produced a diversity of life. We are interested in learning about the actual history of life on Earth as well as the general properties of evolution that have contributed to these historical patterns.
