

neuroscience purves pdf

Neuroscience (or neurobiology) is the scientific study of the nervous system. It is a multidisciplinary branch of biology, that combines physiology, anatomy, molecular biology, developmental biology, cytology, mathematical modeling and psychology to understand the fundamental and emergent properties of neurons and neural circuits.

Neuroscience - Wikipedia

An empirical theory of perception is a kind of explanation for how percepts arise. These theories hold that sensory systems incorporate information about the statistical properties of the natural world into their design and relate incoming stimuli to this information, rather than analyzing sensory stimulation into its components or features

Empirical theory of perception - Wikipedia

The brain is complex and dynamic. The spatial scales of interest to the neurobiologist range from individual synapses ($\hat{\sim}1\frac{1}{4}$ $\hat{I}\frac{1}{4}$ m) to neural circuits (centimeters); the timescales range from the flickering of channels (less than a millisecond) to long-term memory (years).

From Neuron to Brain, Fifth Edition, provides a readable, up-to-date book for use in undergraduate, graduate, and medical school courses in neuroscience. As in previous editions, the emphasis is on experiments made by electrical recordings, molecular and cellular biological techniques, and behavioral studies on the nervous system, from simple ...
