Metallurgy is a domain of materials science and engineering that studies the physical and chemical behavior of metallic elements, their inter-metallic compounds, and their mixtures, which are called alloys. Metallurgy is used to separate metals from their ore. Metallurgy is also the technology of metals: the way in which science is applied to the production of metals, and the engineering of ...

Cementation is a type of precipitation, a heterogeneous process in which ions are reduced to zero valence at a solid metallic interface. The process is often used to refine leach solutions.. Cementation of copper is a common example. Copper ions in solution, often from an ore leaching process, are precipitated out of solution in the presence of solid iron. ...

Metal Injection Molding: PIM International, the industry

These Metal Powders are mostly used in various industries like chemical, automotive, powder metallurgy, and engineering industry, which are made of pure metals. Our ranges of these powders are offered in numerous configurations as per the client's requirement. We offer these powders with varying particle sizes which can be categorized as fine, superfine and ultrafine.
