20. For most applications the silicon diode is the device of choice due to its higher temperature capability. Ge typically has a working limit of about 85 degrees centigrade while Si can be used at temperatures approaching 200 degrees centigrade. Silicon diodes also have a higher current handling capability.

â€¢ Silicon is the most common material used to build semiconductor devices. â€¢ Si is the main ingredient of sand and it is estimated that a cubic mile of seawater contains 15,000 tons of Si. â€¢ Si is spun and grown into a crystalline structure and cut into wafers to make electronic devices.

The following text is designed to provide an efficient introduction to electronic circuit design. The text is divided into two parts. Part I is a barebones introduction to basic electronic theory while Part II is designed to be a practical manual for designing and building working electronic circuits.
