In mathematics, a partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. PDEs are used to formulate problems involving functions of several variables, and are either solved by hand, or used to create a relevant computer model. A special case is ordinary differential equations (ODEs), which deal with functions of ...

A parabolic partial differential equation is a type of partial differential equation (PDE). Parabolic PDEs are used to describe a wide variety of time-dependent phenomena, including heat conduction, particle diffusion, ocean acoustic propagation (in a certain approximation), and pricing of derivative investment instruments.. To define the simplest kind of parabolic PDE, consider a real-valued ...

Ian, With respect, David is addressing her points exactly. I don't see how replying on her site helps? It's difficult to post an appropriately long reply with equations over there, and in any case, by the time we know she's posted there are already a lot of (mostly pointless) comments at the blackboard.

This paper studies the notion of W -measurable sensitivity in the context of semigroup actions. W -measurable sensitivity is a measurable generalization of sensitive dependence on initial conditions.

In fisica, matematica e ingegneria, in particolare nella teoria dei sistemi, un sistema dinamico Ã un modello matematico che rappresenta un oggetto con un numero finito di gradi di libertÃ che evolve nel tempo secondo una legge deterministica. Un sistema dinamico viene identificato da un vettore nello spazio delle fasi, lo spazio degli stati del sistema, dove "stato" Ã un termine che indica ...
