Introduction. Atomic layer deposition (ALD) is a technique capable of depositing a variety of thin film materials from the vapor phase. ALD has shown great promise in emerging semiconductor and energy conversion technologies.

### **A brief review of atomic layer deposition: from**

A lubricant is a substance, usually organic, introduced to reduce friction between surfaces in mutual contact, which ultimately reduces the heat generated when the surfaces move.

Wear is the damaging, gradual removal or deformation of material at solid surfaces. Causes of wear can be mechanical (e.g., erosion) or chemical (e.g., corrosion). The study of wear and related processes is referred to as tribology.

Desgaste é a perda progressiva de material devida ao movimento relativo entre a superfície e a substância com a qual entra em contato [1]. Está relacionado com interações entre as superfícies e, mais especificamente, a remoção e a deformação do material sobre uma superfície como resultado da ação mecânica da superfície oposta.
