Directory Services Restore Mode (DSRM) is used on a Microsoft Windows Domain Controller to take the Active Directory on that machine offline.

**Directory Services Restore Mode - Wikipedia**

System Restore is a feature in Microsoft Windows that allows the user to revert their computer's state (including system files, installed applications, Windows Registry, and system settings) to that of a previous point in time, which can be used to recover from system malfunctions or other problems. First included in Windows ME, it has been included in all following desktop versions of Windows ...
