

introduction to liquid state pdf

A liquid is a nearly incompressible fluid that conforms to the shape of its container but retains a (nearly) constant volume independent of pressure. As such, it is one of the four fundamental states of matter (the others being solid, gas, and plasma), and is the only state with a definite volume but no fixed shape. A liquid is made up of tiny vibrating particles of matter, such as atoms, held ...

3 Fluorinert Electronic Liquid FC-72 Not for specification purposes All values determined at 25°C unless otherwise specified 3M Fluorinert Electronic Liquid FC-72 is a clear, colorless, fully fluorinated liquid. Like other Fluorinert electronic liquids, Fluorinert liquid FC-72 is thermally and

Fluorinert

A liquid is a nearly incompressible fluid that conforms to the shape of its container but retains a (nearly) constant volume independent of pressure. The volume is definite if the temperature and pressure are constant. When a solid is heated above its melting point, it becomes liquid, given that the pressure is higher than the triple point of the substance.
