Magnetoencephalography (MEG) is a functional neuroimaging technique for mapping brain activity by recording magnetic fields produced by electrical currents occurring naturally in the brain, using very sensitive magnetometers.

Defects, surfaces and interfaces play a major role in the transport and catalytic properties of functional materials. This symposium will focus on strategies to understand and control the functional properties of ionic and mixed conducting materials, with a view toward their application in solid state devices, such as batteries, solid oxide ...

[Download in printable PDF format] After centuries of being considered an 'old wives tale', magnetism is finally coming into its own. We now know that fish are able to return to their spawning grounds by following the earth's magnetic lines or force, in the same way that birds do.
