Systems Simulation: The Shortest Route to Applications. This site features information about discrete event system modeling and simulation. It includes discussions on descriptive simulation modeling, programming commands, techniques for sensitivity estimation, optimization and goal-seeking by simulation, and what-if analysis.

Marketing mix modeling (MMM) is statistical analysis such as multivariate regressions on sales and marketing time series data to estimate the impact of various marketing tactics (marketing mix) on sales and then forecast the impact of future sets of tactics. It is often used to optimize advertising mix and promotional tactics with respect to sales revenue or profit.

# Marketing mix modeling - Wikipedia

The General Algebraic Modeling System (GAMS) is a high-level modeling system for mathematical optimization. GAMS is designed for modeling and solving linear, nonlinear, and mixed-integer optimization problems. The system is tailored for complex, large-scale modeling applications and allows the user to build large maintainable models that can be adapted to new situations.

The availability of detailed environmental data, together with inexpensive and powerful computers, has fueled

a rapid increase in predictive modeling of species environmental requirements and geographic distributions.

### Maximum entropy modeling of species geographic

NONLINEAR PROGRAMMING min  $x\hat{a}^X$  f(x), where  $\hat{a} \in \phi$  f: n  $\hat{a}^*$  is a continuous (and usually differ- entiable) function of n variables  $\hat{a} \in \phi$  X = nor X is a subset of with a  $\hat{a} \in \phi$  continu- ous  $\hat{a} \in \phi$  lf X = n, the problem is called unconstrained  $\hat{a} \in \phi$  If f is linear and X is polyhedral, the problem is a linear programming problem. Otherwise it is a nonlinear programming problem

This paper presents a survey of methods and techniques developed for the solution of the continuous gas-lift optimization problem over the last two decades. These range from isolated single-well analysis all the way to real-time multivariate optimization schemes encompassing all wells in a field. While some methods are clearly limited due to their neglect of treating the effects of inter ...
