ITER (International Thermonuclear Experimental Reactor) is an international nuclear fusion research and engineering megaproject, which will be the world's largest magnetic confinement plasma physics experiment. It is an experimental tokamak nuclear fusion reactor that is being built next to the Cadarache facility in Saint-Paul-lès-Durance, in Provence, southern France.

In nuclear engineering, a neutron moderator is a medium that reduces the speed of fast neutrons, thereby turning them into thermal neutrons capable of sustaining a nuclear chain reaction involving uranium-235 or a similar fissile nuclide.. Commonly used moderators include regular (light) water (roughly 75% of the world's reactors), solid graphite (20% of reactors) and heavy water (5% of reactors).

La fusione nucleare è il processo di reazione nucleare attraverso il quale i nuclei di due o più atomi vengono avvicinati o compressi a tal punto da superare la repulsione elettromagnetica e unirsi tra loro generando il nucleo di un elemento di massa minore, o maggiore, della somma delle masse dei nuclei reagenti, nonché, talvolta, uno o più neutroni liberi.

Xenon är ett icke-metalliskt grundämne med atomnummer 54 och kemiskt tecken Xe. Det är en tung, färg- och luktlös ädelgas som förekommer i mindre mängder i jordens atmosfär. [2] Även om gasen sällan reagerar med andra ämnen så kan xenon genomgå ett antal kemiska reaktioner som exempelvis bildandet av xenonhexafluorplatinaat (PtF<sub>6</sub> Xe), den första ädelgasföreningen som framställts.
