From crystal structure prediction to totally empirical screening, the quest for new crystal forms has become one of the most challenging issues in the solid state science and particularly in the pharmaceutical world. In this context, multi-component crystalline materials like co-crystals have received renewed interest as they offer the prospect of optimized physical properties.

Pharmaceutical co-crystals: In recent years, the development of a pharmaceutical co-crystal has become a novel strategy to improve the solid state properties of an API. Co-crystals are an alternative to salts when these do not have the appropriate solid state proper-

The formation of salts is invaluable for the preparation of safe and effective dosage forms of many drugs , , .Whether the drug products are solutions or solids, the use of a salt provides a higher concentration in solution than the free acid or free base (nonionized forms).

As a consequence, there has been a rapid increase in the number of drugs produced in salt form, so that

today almost half of the clinically used drugs are salts. This, combined with the increase in generic drug production, means that many drugs are now produced in more than one salt form.
