1.4 Earth System Science Earth system science aims to understand Earth as a system made up of interacting parts, or subsystems. A system can be any size group of interacting parts that form a complex whole. In a closed system, matter does not enter or leave the system. In an open system, energy and matter flow into and out of the system.

Chapter 1 Introduction to Earth Science

The unequal distribution of heat within Earth causes the thermal convection in the mantle that ultimately drives plate motion. Mantle plumes are masses of hotter-than-normal mantle material that ascend toward the surface, where they may lead to igneous activity.
