In physics, relativistic quantum mechanics (RQM) is any Poincaré covariant formulation of quantum mechanics (QM). This theory is applicable to massive particles propagating at all velocities up to those comparable to the speed of light c , and can accommodate massless particles.

In quantum mechanics, a Hamiltonian is an operator corresponding to the total energy of the system in most of the cases. It is usually denoted by H , also \hat{E} or \hat{H} . Its spectrum is the set of possible outcomes when one measures the total energy of a system.

Características del modelo. El modelo atómico de Schrödinger concebía originalmente los electrones como ondas de materia. Así, la ecuación se interpretaba como la ecuación ondulatoria que describía la evolución en el tiempo y el espacio de dicha onda material.

Seit 1862 werden die Spektrallinien im Absorptions- und Emissionsspektrum des Wasserstoffatoms untersucht. Sie werden verursacht durch den Übergang des gebundenen Elektrons von einem höheren in ein niedrigeres Niveau (Emission) oder umgekehrt (Absorption).

La ecuación de Schrödinger, desarrollada por el físico austriaco Erwin Schrödinger en 1925, describe la evolución temporal de una partícula subatómica masiva de naturaleza ondulatoria y no relativista.
