Quantum Wells, Wires and Dots: Theoretical and

Quantum wells, wires and dots are quantum heterostructures in which electrons and holes are confined in definite regions of space (e.g., [7, 8]). Specifically, depending on the dimensionality of the confinement region, the corresponding structure realizes a quantum well (2D confinement), quantum wire (1D confinement) or a quantum dot (point like ...

Introduction: Quantum Wells, ultrathin, quasi 3-D planes are just one of the three basic components of quantum devices. A narrow strip sliced from one of the planes is a 1-D quantum wire.
