In statistics, inter-rater reliability (also called by various similar names, such as inter-rater agreement, inter-rater concordance, interobserver reliability, and so on) is the degree of agreement among raters. It is a score of how much homogeneity, or consensus, there is in the ratings given by various judges. In contrast, intra-rater reliability is a score of the consistency in ratings given ...

The details about these tools will be brief as books are written about each item. Think of the presentations below as hors d'œuvre (a little snack food or starters) – not the main course. The most important reliability tool is a Pareto distribution based on money – specifically based on the cost of unreliability which directs attention to work on the most important money problem first.
