700 ELECTRO-OPTICS called the Kerr coefficient or the quadratic electro-optic coefficient. Typical values of G are  $10^{-12}$  to  $10^{-14}$  m<sup>2</sup>/V<sup>2</sup> in crystals and  $10^{-22}$  to  $10^{-19}$  m<sup>2</sup>/V<sup>2</sup> in liquids.

The physical constant  $\epsilon_0$  (pronounced as "epsilon nought"), commonly called the vacuum permittivity, permittivity of free space or electric constant or the distributed capacitance of the vacuum, is an ideal, (baseline) physical constant, which is the value of the absolute dielectric permittivity of classical vacuum. It has an exactly defined value  $\epsilon_0 = 8.854\ 187\ 817\ \dots \times 10^{-12}$  F·m<sup>-1</sup> ...

Electro-optic modulator (EOM) is an optical device in which a signal-controlled element exhibiting the electro-optic effect is used to modulate a beam of light. The modulation may be imposed on the phase, frequency, amplitude, or polarization of the beam. Modulation bandwidths extending into the gigahertz range are possible with the use of laser-controlled modulators.

An analytical simulation by Lam et al. [1] showed that the sublinear model was accurate in describing the saturation of degradation in aging curves. It was assumed that the change in threshold current was given by the change in the nonradiative recombination current that was proportional to the defect density.

Als Wellenoptik oder physikalische Optik bezeichnet man in der Physik den Teilbereich der Optik, der Licht als elektromagnetische Welle behandelt. Mithilfe der Wellenoptik lassen sich Eigenschaften wie Farbe, Interferenzfähigkeit, Beugung und Polarisation des Lichtes erklären, die mit geometrischer Optik nicht erklärbar sind.

Il fotone, come ogni oggetto quantistico, possiede sia le proprietà di una particella sia quelle di un'onda. Tale caratteristica, detta dualismo onda-particella, è provata da fenomeni come la diffrazione e l'interferenza, verificati da molti esperimenti tra cui l'esperimento della doppia fenditura, in cui il passaggio di un singolo elettrone genera una figura di diffrazione.
