BIOLOGY, PREVENTION, AND CONTROL EB0787 COOPERATIVE EXTENSION. Termites are among the most important structural insect pests in the Northwest. Only carpenter ants rival them in importance. Termites feed on wood or wood products, and their digestive tracts contain microorganisms which enable them to convert the cellulose in wood into usable food. Most termites need moist conditions to become ...

Drywood Termite Biology, Identification, and Control Drywood termites are primitive termites whose damage often goes unnoticed by homeowners. They are similar to the familiar subterranean termites¹. Drywood termites belong to the family Kalotermitidae. Their ecology and behavior are distinctly different from the subterranean termites, a fact which alters their monitoring and control ...

Drywood Termite Biology, Identification, and Control

Subterranean termites are the single greatest economic pest in the United States. These termites cause billions of dollars in damage each year to homes, historical structures, and commercial buildings. In addition to buildings, termites also consume valuable books, documents and photographs. Subterranean termites have existed for over 55 million years and are extremely good at what they do. A ...
